

Logical:

```
public class SumOfArray {
    public static int sum(int[] arr) {
        int sum = 0;
        for (int i = 0; i <= arr.length; i++) {
            sum += arr[i];
        }
        return sum;
    }
    public static void main(String[] args) {
        int[] arr = {1, 2, 3, 4};
        System.out.println(sum(arr));
    }
}
```

Syntax:

```
class Parent {
    private void display() {
        System.out.println("Parent");
    }
}
class Child extends Parent {
    public void display() {
        System.out.println("Child");
    }
}
public class Test {
    public static void main(String[] args) {
        Child c = new Child();
        c.display();
    }
}
```
