

Logical:

```
#include <iostream>
using namespace std;
int main() {
    int arr[] = {1, 2, 3, 4, 5};
    int max = arr[0];
    for (int i = 1; i < 5; i++)
        if (arr[i] > max)
            max = arr[i];
    else
        max = arr[i];
    cout << "Max: " << max;
    return 0;
}
```

Syntax:

```
#include <iostream>
using namespace std;
int main() {
    cout << ((a * 2));
    return 0;
}
```
